

Name: A

Age: 6

Gender: Girl

Ethnicity: Black African

A is a high achieving child who excels in all areas of the curriculum. She comes from a very supportive home and will always strive to complete her work to the best of her ability. Despite being quite a quiet child she has many strong friendships and loves being at school. Through playing the 'Henri Le Worm' app A has been able to experiment with fractions, capacity and weight by making her own potato salad, vegetable curry and carrot cake muffins. This activity also aided her literacy where she learnt about instructions and created her own healthy recipes using food found under ground; many of which are highlighted on the app. She is now able to use connectives a lot more confidently to justify her reasoning behind liking or disliking a part of the app, which she now relays to the other areas of her reading and writing. She has learnt how the same food can be prepared in a variety of different ways and has enjoyed creating and tasting the different meals. A made a real connection with Texas Lou the friendly spider, and talked very openly about how she would like to be more like Texas Lou because she is a friendly, kind, helpful and positive character. Using the app we explored the concept of dialogue and A is now attempting to use much more complicated punctuation such as speech marks throughout her writing. A continues to make progress in all areas of the curriculum and I believe it is thanks to the flexibility and cross curriculum links with the app that I have been able to create active, thought provoking and creative lessons which continue to benefit and challenge children like A.
